*Many Improvements
That Mean Money to Every Display Man*

International Register Company

15 South Throop Street—Chicago, Illinois, U. S. A.

The New K8 Cutawl has improvements developed out of the experience of thousands of users of previous models. Every suggestion received has been given most careful consideration, so that the improvements incorporated in the new model embody practical suggestions of actual users. The new features of the K8 Cutawl speed up cutting, improve accuracy, and increase the ease of operation. They enable it to handle thicker and harder materials and make it more than ever the chief aid of the display man in turning out work that commands attention and so makes profits.

Note the new features and see how they increase the value and applications of the K8 Cutawl.

New Swivel Lock

The new swivel lock simplifies the cutting of straight lines and greatly facilitates certain types of sawing. With the chisel locked in place, it will be found much easier to cut a perfectly straight line, since the effect of minor variations in direction is eliminated. When locked, only a major change in the position of the machine appears as an irregularity in the line. Locking the swivel is also of advantage in trimming the edge of material with either the chisel or saw.

New Guide Foot

The new guide foot is provided with a rigid support for its entire length. This reduces wear and insures the foot being held in the proper position to give maximum delicacy and accuracy in cutting. The speed of cutting is increased, the operator's time is saved, better work is done, and greater profits accrue as a result of this feature.

New Chisel Block

The new chisel block operates like a vise. It clamps the shank of the chisel for its entire length and insures perfect alignment without distortion or excessive strain at any point. The chisel or saw always occupies exactly the position it should with relation to the foot and other parts of the machine. More accurate work is done and the chisel and saw life are greatly increased.

New Oil Seal

A few spots of grease on a surface which is to be painted may completely ruin an otherwise perfect effect. The new oil seal with which the K8 is equipped prevents leakage of grease, yet insures ample lubrication. It is readily replaceable with ordinary tools by the layman.

Larger Plunger

The diameter of the plunger has been increased by 25 per cent, which enables it to bear the heaviest strain the most rapid cutting with chisel or saw will put upon it.

Larger and Longer Bearings

Every bearing in the new K8 Cutawl is designed for the heaviest service. The main plunger bearing has been increased in size and doubled in length. Increased smoothness of operation, greater accuracy and longer life result.

New Guide Foot Lock

The new lock is easier to operate. In one second it locks the guide foot up off the work ready for the insertion and use of a saw.

The demand of today is for quality work at low prices. To reduce costs Cutawl users have required faster cutting and more thicknesses at one time. The new K8 has had every vital part strengthened to meet the demands of the modern shop. Bearings have been enlarged, reciprocating parts have been increased in size, heavier construction has been used throughout the machine—the result is smoothness and accuracy of operation which is a revelation. The new K8 will cut every material used by the display man rapidly and accurately into any design which can be conceived. The whole machine is intended for the hardest possible service. It can be used day after day, all day, without injury or undue wear.

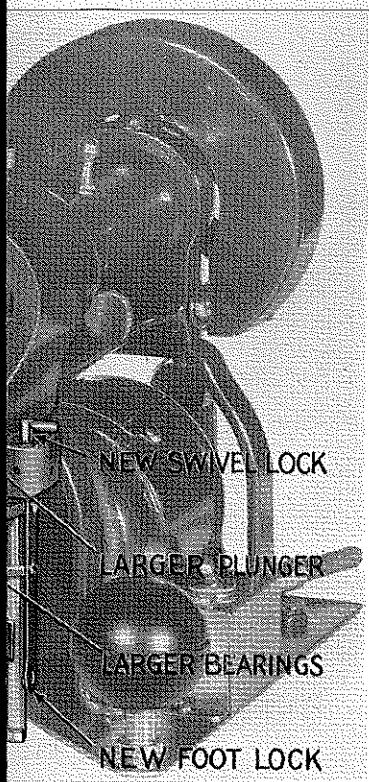

The new K8 will cut any design in—

Aluminum	Celotex	Galvanized Iron	Rubber
Asbestos	Cloth	Homasote	Steel
Auditec	Compo Board	Insulite	Stencil Board
Bakelite	Cork	Lead	Upson Blue
Beaver Board	Cornell Board	Leather	Center Board
Brass	Felt	Linoleum	Veneer, 3 Ply
Cardboard	Fibre Sheet	Masonite	Wood
Celluloid		Paper, All Kinds	Zinc

It carries cutting ease a step further than ever before. It is the best machine available for cutting backgrounds, screens, stencils, frames, mannikins, silhouettes—all the thousand and one cutout designs which add life and selling power to displays. Cutouts, more than any other advertising means, add the human interest which attracts attention, creates desire and makes sales. That is why they are extensively used

by such companies as Sears, Roebuck & Company, Montgomery Ward & Company, Wanamaker's, Paramount Publix, Radio-Keith-Orpheum, S. H. Kress & Company, Walgreen Drug Company—and a host of others who are noted for being the keenest and most up-to-date merchandisers in their respective lines. Cutouts have universal appeal and the CUTAWL is the only economical way of making them.

The Cutawl Carrying Case and the Cutawl accessories—Circle Cutter, Bevel Cutter and Saw Table, can be used more effectively than ever with the K8 Cutawl. Use the Circle Cutter and Bevel Cutter to introduce novel effects and unusual patterns into your work—and the Saw Table to saw in thick wood or heavy metal the intricate designs which are cut so easily in softer materials with the chisel. The swivel mounting of the saw mechanism—an exclusive feature—makes the Cutawl the most convenient saw available.

PRICE

K8 Cutawl with 110-120 volt motor and standard equipment.....\$135.00 f.o.b. Chicago
 An additional charge of \$5.00 will be made for motors of voltage other than 110-120.
 Give voltage when ordering.

STANDARD EQUIPMENT

The standard equipment of each Model K8 Cutawl is as follows:

1 Cutawl complete with Motor	6 No. 3 Chisels 6 No. 8 Chisels 12 No. 11 Chisels 12 No. 13 Saw Blades	1 Screw Driver 1 Tube Cutawl Lubricant Instructions
12 No. 0 Chisels		

EXTRAS
